

Zenome network is the new decentralized Internet protocol

ZENOME is a decentralized database owned by the community in which the ZNA's internal cryptocurrency stimulates to contribute its genomic data and fill out questionnaires (with medical and other personal information).

PROBLEM STATEMENT

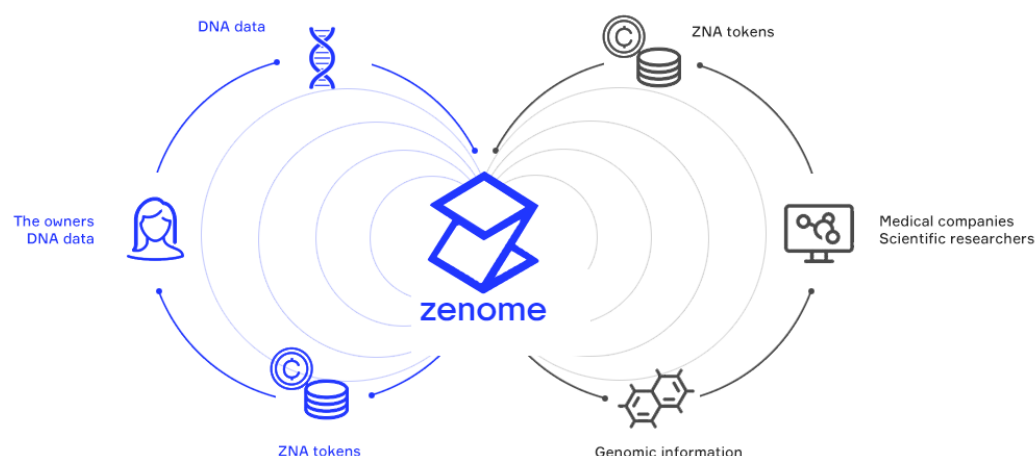

- Nowadays, more than 10 million people have undergone DNA testing (1 billion by 2025)
- Pharmaceutical companies need genetic data to develop new drugs
- FMCG companies use genomics to create personalized products
- Large companies and corporations monopolize the genomic databases, which leads to an increase in prices and inhibition of the science
- Genomics will be the main data generator on the Internet in the next 10 years

SOLUTION

What will the community and the whole mankind receive from the project?

- Demonopolization of the big genomic data
- Reducing cost of a drug development
- Accelerating the development of science and medicine
- The possibility of using machine learning and artificial intelligence for accurate diagnosis and calculation of risks from genomic data
- You own your DNA

ZNA token circulation

TOKEN SALE TERMS

Dates: **September 3-17, 2018**

Hard cap (2nd stage): **1 150 000 ZNA**

Exchange rate: **1 ZNA (ERC-20) token = \$1.0**

Min/Max purchase: **1/1000 ETH**

Purchase methods: **Bitcoin (BTC) Ethereum (ETH)**

Know your customer (KYC): **Required**

ZENOME NETWORK

The platform has the following organization levels:

• Basic System Layer (Critical Infrastructure)

Low-Level Interoperation Basic subsystem of message exchange between network nodes. It also enables creation of distributed hash tables.

• Data Storage and Processing Level

Stores Abstraction level for access to distributed file system. Processing Infrastructure for a distributed calculations.

• High-Level Interactions

Secure queries A subsystem that enables formation of the offers for buying genomic data which could be shown to appropriate users only.
