

# The Zenome platform

## TOKEN SALE TERMS

Introducing the world's first ecosystem that allows to build a market of personal genomic information.

### You are the one in control

Data is saved strongly encrypted on the distributed P2P network. The only one to decide who have access to genetic information and personal data is the user itself. Period.

### Become a DNA-hacker

If you know what you are doing, you can get intermediate results medical workers use to make interpretations. Beware, it could be misleading or confusing to non-specialist.

### Your Data — Your Money

Many companies are interested in genetic data. And they are ready to pay for it. Don't feel that you have to share. But If you accept an offer, the money is yours.

### Try Personal Genomics

Benefit from personalized medicine: share data with a doctor to get medical advice. Request for an anonymous report based on your data by a registered practitioner.

### Use Genetic Services

Get detailed reports and recommendations on nutrition, cosmetology and sport. Be social: try genetic-aware social networks and genetic dating services.

### Stay Informed

The system will explicitly warn you about possible privacy issues, if any, before sending you data to anybody. No way to unknowingly compromise own privacy.

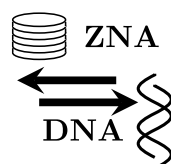

## ZNA Token Economics

The Zenome Platform is a place where genetic information, personal data and economic transactions are intertwined, coexist simultaneously and interact. It is possible thanks to, powerful at their own, two different decentralized technologies: P2P network and blockchain.

In particular, blockchain makes it possible to take full advantage of smart-contrats. ZNA (Zenome DNA Token) is an dedicated utility token that powers decentralized economics of the Zenome platform.

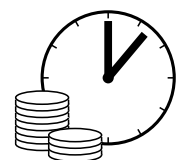

Payment Method

Value Exchange

Nodes' Reward

Long-term Incentives

The Zenome is a non-profit organization. Its mission is to provide platform's economic growth and sustainable development. A non-profit status ensures that all the profit is channeled back into the organization's activities and contributes to the token value.

## Token distribution and allocation

Tokens (ZNA) can be bought for ETH and BTC. You should pass KYC procedure before obtaining ZNA. Total amount of ZNA tokens will not exceed 35 000 000.

<b>45%</b>	Offered for sale	<b>25%</b>	Reserved as long-term incentives
<b>10%</b>	Zenome Foundation	<b>10%</b>	Founders
<b>6%</b>	Developers	<b>4%</b>	Advisors and bounty

The Zenome token distribution will be performed in several stages.

Stage	Tokens	Pricing	Goals
<b>Pre-sale</b>	353 173	Constant, 0,3\$/token	Minimal vital product release
<b>I</b>	2 846 827	Constant, 0,6\$/token + Discount (see below)	First draft of network specification At least 4 service providers Exchanging genetic data is implemented Tokens listed on exchanges
<b>II</b>	3 500 000	Dynamic	Network of at least 1000 participants Blockchain used to enforce security and trust Buying genetic data is implemented
<b>III</b>	4 500 000	Dynamic	Network of at least 100 000 participants Blockchain-based genomic-specific features Tokens can be easily obtained with USD
<b>IV</b>	4 500 000	Dynamic	Network of at least 1 000 000 participants The platform is fully developed, i.e. everything from WP is implemented

### During the 1st stage there is discount for big transactions:

- 0,50 \$/ZNA for transactions from 50 000\$ to 200 000\$,
- 0,45 \$/ZNA for transactions from 200 000\$ to 500 000\$,
- 0,40 \$/ZNA for transactions of more than 500 000\$.

**Dynamic pricing:** tokens are distributed among the participants proportionately to their contributions at that stage. Participants receive their tokens after stage end.
